EDUCATION

Masters in Computer Science California State University, Long Beach, California	May 2024
Bachelors in Computer Science and Engineering Anna University, Chennai, India	May 2021

TECHNICAL SKILLS

Languages: C, C++, Java, JavaScript, SQL, Python, HTML, CSS
Frameworks: Springboot, React, NodeJS, J2EE
Tools & Technologies: Git, JUnit, Visual Studio, REST API, Kubernetes, Eclipse, Devops, Jenkins, Docker.
Databases & Cloud Services: MySQL, PostgreSQL, MongoDB, AWS, Azure
Miscellaneous: Data Structures & Algorithms, Object Oriented Programming, Natural Language Processing.

PROFESSIONAL EXPERIENCE

Accenture Solutions, India: Associate Software Engineer	Oct 2021 - Aug 2022
- Collaborated with a team of full stack engineers in a Spring Boot project to enhance banking transaction system, achieving 25% faster processing and improved reliability. - Contributed to the development and comprehensive testing of a RESTful API using Node.js, successfully optimizing performance to achieve an outstanding response time of 400 milliseconds. - Associated with a team of experienced DevOps engineers, utilizing automated testing and CI/CD tools to streamline complex pipelines, resulting in a 33% reduction in complexity and enhancing version control automation to the client server. - Developed containerized microservices for a banking app on Azure with Docker and Kubernetes, cutting server provisioning by 50%. - Successfully optimized database operations in the banking CRM systems by integrating MySQL and NoSQL technologies, achieving a 25% improvement in response times for large data sets	
XCEL Corp, India: Android Application Developer (Intern)	Jun 2019 – Nov 2019
- Utilized Java to write scalable and maintainable code, contributing to backend development that ensured a 40% reduction in data synchronization times between the mobile app and the server. - Applied advanced algorithms and data structures to enhance the app's search functionality, achieving a 35% quicker search result retrieval, significantly saving time for users looking for specific customer data and sales histories. - Employed version control (Git) best practices to manage code updates, which reduced code integration issues by 50%, ensuring smoother collaboration across the development team.	

PROJECTS

Optimizing Inventory and Sales in Global Coffee Chains: Advanced AI Approach	Aug 2023 - Dec 2023
- Successfully analyzed inventory data from 132 stores, leading to enhanced sales performance and operational efficiency for a global coffee chain. - Developed and applied predictive models, including linear regression and deep learning, to forecast sales with high accuracy, significantly influencing strategic decision-making.	
Web Application to analyze Stock Market Results using Machine Learning	Jan 2021 - Apr 2021
- Utilized React to develop an engaging user interface for stock market predictions using LSTM, enhancing user experience and performance., yielding a remarkable surge in performance by 80% - Achieved 73% precision in data presentation on the frontend, ensuring clear and accurate visualization of LSTM. - Led the front-end creation of a trading platform using React, integrated with NodeJS and AWS, serving over 100 traders.	
React-Based Netflix Clone: A Full-Stack Web Application Project	May 2023 - Jul 2023
- Developed an interactive user interface utilizing React framework to replicate the front-end of Netflix. - Integrated third-party APIs for content management and conducted extensive testing to optimize both front-end responsiveness and back-end efficiency.
